

```
class Fetch extends React.Component {  
  state = { post: null };  
  
  componentDidMount() {  
    this.props.get(this.props)  
      .then(post => this.setState({ post }));  
  }  
  
  render() {  
    const { post } = this.state;  
  
    return this.props.children({ ...post });  
  }  
}
```

```
const App = () => (  
  <Fetch get={props => fetch(`/posts/${props.id}`)}>  
    {props => <Post {...props} />}  
  </Fetch>  
) ;
```
