

```
class PostContainer extends React.Component {  
  state = { post: null };  
  
  componentDidMount() {  
    fetch(`/posts/${this.props.id}`)  
      .then(post => this.setState({ post }));  
  }  
  
  render() {  
    const { post } = this.state;  
  
    return this.props.children({ ...post });  
  }  
}
```

```
const App = () => (  
  <PostContainer>  
    {props => <Post {...props} />}  
  </PostContainer>  
);
```
