```
class PostContainer extends React.Component {
  state = { post: null };

  componentDidMount() {
    fetch(`/posts/${this.props.id}`)
      .then(post => this.setState({ post }));
  }

  render() {
    const { post } = this.state;

    return this.props.render({ ...post });
  }
}
```

```
const App = () => (
  <PostContainer render={props => <Post {...props} />} />
);
```
